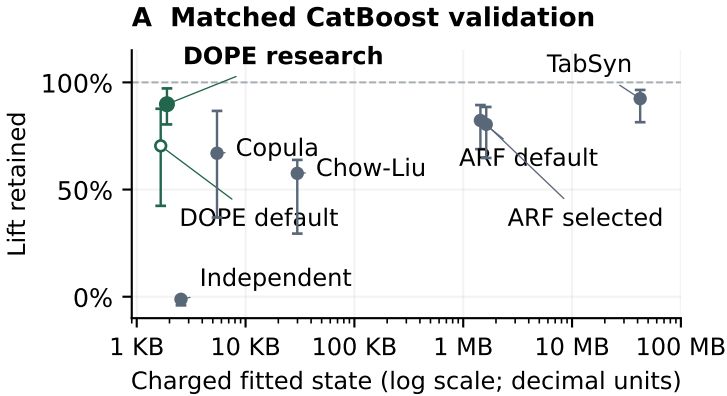
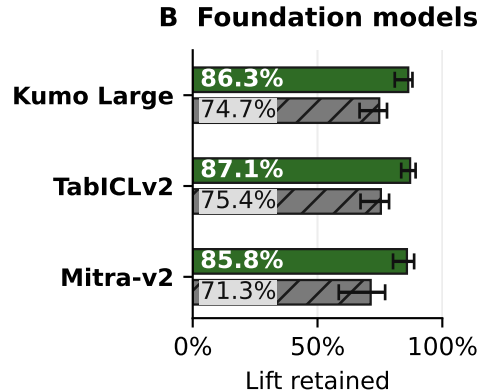
Preserve predictive lift. Charge every byte.

Selection-exposed validation | A: historical 95% interval; B: historical 95% interval





DOPE / TabSyn median state: 22,301x smaller.
CatBoost: inconclusive, not equivalence.

DOPE (1,844 B)
Gaussian copula (5,464 B)

Panel B: More predictive gain. About one-third the state.

A: 99 lineages; B: separate 97-lineage cohort; both 4n. TDL and cold closure unmeasured.
Cross-model feature-driver preservation: not yet measured. Pretraining overlap unknown.
