Official training rows. Grouped 80/20 split. Official test is excluded from the inputs.
Residual generator. At most 12 inputs, width 16, tanh. AdamW, 2,048 steps, learning rate 0.002.
Refit readout a, β, and v on the frozen tanh features.
CTGAN and TVAE select on the validation auditors; the native density baselines select by held-out log density. Retention is the shared column.
Common measurement on validation rows. Auditors: CatBoost, linear, and MLP.
Retention and charged bytes.
